This project (2014 - 2016) was funded by the Canadian Frailty Network (previously Technology Evaluation in the Elderly Network) and supported by Government of Canada through Networks of Centres of Excellence

Canadian Frailty Network | Réseau canadien des soins aux personnes fragilisées

Known previously as Technology Evaluation in the Elderly Network, TVN

RESEARCH TOPIC

- The aspects of end-of-life (EOL) care that are perceived as important by bereaved caregivers of residents who spend the end of their lives long-term care (LTC) homes

OBJECTIVES

- This study seeks to expand upon the efforts being made to support resident comfort in LTC homes by determining what aspects of EOL care are associated with a caregiver's perceptions of a 'good' resident death

DESIGN

- 78 caregivers whose resident died in one of five Canadian LTC homes completed two questionnaires regarding their experiences with the EOL care provided in their respective LTC home within one year of the resident's passing

RESULTS

- Overall, caregiver participants reported high levels of resident comfort and that they had positive experiences with EOL care in LTC
- Staff communication and resident care were two aspects that caregiver considered as critical with regards to resident comfort at EOL

IMPLICATIONS

- This study highlights the important role that staff communication and resident care play in supporting positive bereavement experiences for caregivers
- LTC staff have the potential to enhance caregivers' perceptions of a positive resident death by keeping them informed and providing good resident care
